

## Wordpress Themes Reviewed

James Schramko here with a review update.

Today's topic is WordPress, in particular, the themes. You may be familiar with the fact that I've used [Thesis](#) and [OptimizePress](#) almost exclusively until now. But recently we started developing on the [Genesis Framework](#) and it's a really good theme. It's very light, it's very well made, it's heavily supported by the developer community and we're finding that it's the easiest platform to develop our custom websites on. In fact recently we've been switching over a lot of our Thesis sites to Genesis.

The team are finding it a little bit easier to work on and in some cases we're also converting some of our OptimizePress sites. Now if you're using OptimizePress and you use it for sales gateways and videos and social sharing buttons the way that it's designed to be used. Then that's probably still the best choice for you for sales pages. But for any other type of website, Genesis is now my top recommendation.

We've also added a bonus so that you could get a bonus when you buy Genesis through our BuyWithBonus site.

Now on the topic of training people on how to use WordPress, I've recently purchased a license from [WP101](#) and that allows us to use training videos for all of our web development customers. I recommend that you consider that if you're a web developer or if you have a community of people who use WordPress. I'm getting great feedback from it. And it certainly saves you having to film all of the basic WordPress tutorials or send your customers off to YouTube to look up free videos.

So there are my two top recommendations around WordPress this week. I hope you've enjoyed this information.

Be sure to check out our other reviews on [BuyWithBonus.com](#). We're adding new reviews each week and we certainly put everything that we review through the test and make sure that it's top quality.
